

Fly Point Lighting Bar LT-48FP

The LT-48FP gives you an affordable, secure way to add a lighting tree to your existing speaker rig. This 48" lighting crossbar easily and securely attaches to the top of the speaker using the speaker's existing fly point holes (Mounting holes). Once you attach it to your satellite pole or tripod stand based speaker rig, you've added a lighting rig without adding to your footprint. Add some lights and music, and the rest of your party, wedding, dance or corporate event will practically take care of itself!

Included Hardware

The fly point lighting bar ships with hardware to attach two lights on either side of your speaker.

Attaches to Speaker

The fly point lighting bar attaches to the top of the speaker using the speaker's existing fly points (mounting holes). The adjustable mounting brackets easily fit most standard sized speakers.

Over-Sized Tubing

Our lighting bar is made with over-sized tubing for greater strength and dependability.
